3762	0.78	117.9	standard_discount	medium

AI Decision Explanations

Customer 2746

LLM error: Request timed out.

Customer 545

LLM error: Request timed out.

Customer 666

****Churn Decision Explanation:**** This customer is at high risk of churning (0.87 risk score) and is likely to leave within 9.7 months. The recommended action is to offer a flexible payment plan.
****Why Customer is Risky:**** The customer has experienced bill shocks (0.25), indicating unexpected price increases, and has a history of delayed payments (-0.18). Additionally, they have a low value density (-0.05), suggesting they don't use our services enough to justify their current plan. ****Why Action Helps:**** Offering a flexible payment plan can mitigate the customer's financial stress and make our services more affordable, reducing the likelihood of churn. ****Expected Business Impact:**** By implementing this action, we can retain this customer and potentially earn a significant return on investment (ROI: 136.00).

Customer 1185

****Churn Decision Explanation**** This customer is at high risk of churning (0.75 risk score) with a long time to churn (approximately 83 years), indicating a potential long-term loss. The uplift score of 0.43 suggests that a loyalty reward offer can improve customer retention. ****Why Customer is Risky:**** The customer has a low engagement score and a volatile usage pattern, indicating dissatisfaction. The treatment value ratio is also low, suggesting that the customer does not perceive value from our services. ****Why Action Helps:**** A loyalty reward offer can boost engagement and perceived value, reducing the likelihood of churn. ****Expected Business Impact:**** Implementing a loyalty reward offer is expected to yield a 134.20% return on investment, making it a worthwhile retention strategy.

Customer 3762

****Churn Decision Explanation**** This customer is at high risk of churning (0.78 risk score) and is expected to leave in 9 months. The recommended action is to offer a standard discount. ****Why Customer is Risky:**** The customer's CLV (Customer Lifetime Value) is decreasing (-0.08), and their value density is increasing (0.06), indicating they're not getting enough value from our services. Their charge ratio is also decreasing (-0.05), suggesting they're not using our services as much. ****Why Action Helps:**** Offering a standard discount can help retain the customer by making our services more affordable and increasing their perceived value. ****Expected Business Impact:**** By retaining this customer, we can expect a positive ROI of 117.94, making the standard discount a worthwhile investment.
