AI Decision Explanations

Customer 9526

****Churn Decision Explanation**** This customer is at risk of churning due to volatility in usage, payment delays, and a moderate number of complaints. The risk score is 0.64, indicating a moderate level of risk. The customer is expected to churn in 16.8 months. ****Recommended Action:**** Priority Service Call The priority service call is recommended to address the customer's issues and prevent churn. This action is expected to have a high uplift score of 0.72 and a high ROI of 226.23. ****Expected Business Impact:**** By addressing the customer's concerns, we can prevent churn and retain a valuable customer, resulting in significant revenue savings.

Customer 8476

****Churn Decision Explanation**** This customer is at risk of churning with a 62% likelihood and 79 months until they leave. The recommended action is a priority service call. ****Why Customer is Risky:**** The customer has experienced a shock (0.27), indicating a significant issue, and has made complaints (-0.16), suggesting dissatisfaction. They also exhibit usage volatility (0.11), indicating inconsistent behavior. ****Why Action Helps:**** A priority service call addresses the shock and complaints, potentially resolving issues and improving satisfaction. ****Expected Business Impact:**** This action is expected to yield a 49% uplift in customer retention and a 190.47% return on investment, making it a worthwhile investment to prevent churn.

Customer 4403

****Churn Decision Explanation**** This customer is at high risk of churning (0.80 risk score) and has a long time to churn (57.1 months), indicating a potential loss of revenue. The recommended action is a priority service call. ****Why Customer is Risky:**** The customer has a high risk score due to multiple complaints (21%) and low engagement (9%), but also has a recent payment delay (-8%), which could be a one-time issue. ****Why Action Helps:**** A priority service call can address the customer's concerns and improve engagement, potentially reducing the risk of churn. ****Expected Business Impact:**** The expected ROI of this action is 171.62, indicating a significant potential revenue gain from retaining this customer.

Customer 1108

****Churn Decision Explanation**** This customer has a high risk of churning (0.90 risk score) and is likely to leave within 7.2 years (85.7 months). The recommended action is a priority service call.

****Why Customer is Risky:**** The customer has experienced shocks (0.28) and complaints (0.24), but has relatively stable usage (-0.11). This suggests they may be unhappy with their service.

****Why Action Helps:**** A priority service call can address the customer's issues and improve their experience, potentially reducing the likelihood of churn. ****Expected Business Impact:**** By taking this action, we can potentially save \$169.53 (ROI) and retain a valuable customer.

Customer 11081

****Churn Decision Explanation**** This customer has a moderate risk of churning (Risk score: 0.52) and is expected to leave in 31.1 months. The uplift score of 0.48 indicates that addressing their concerns could retain them. The recommended action is a priority service call. ****Why Customer is Risky:**** The customer has had complaints (num__complaints), payment delays

(num__payment_delay), and usage volatility (num__usage_volatility), which are top churn drivers.

****Why Action Helps:**** A priority service call can address these issues, potentially reducing the risk of churn. ****Expected Business Impact:**** With an ROI of 169.32, addressing this customer's concerns could retain them and generate significant revenue.
